

PRESS RELEASE

BEES: THE NEW FRONTIER OF SECURITY MADE IN ITALY

Arnad (AO) - November 8th, 2021. GPS Standard presents BeeS, the new high-tech product for the perimeter security industry.

Resulting from the hard work carried out by our in-house R&D department, BeeS is the new solution for the perimeter security sector: cutting edge tech, innovative, fully designed and manufactured in Italy.

It is **the only system currently on the market developed for the protection of any type of fence**, from the extremely rigid and low ones - typical of the small residential environment - to the lighter, flexible or tall types. Loose mesh, electro-welded, orsogrill, modular and rigid metal fences can now be protected from unwanted intrusions.

The system utilizes the latest generation chipset, with extremely high computing power. BeeS is a **Made in Italy product with the quality and reliability guarantee by GPS Standard**, a company that in almost fifty years of activity has been able to conquer and maintain top level international reputation.

“We are proud - underlines Marco Capula, business strategist at GPS Standard - to enrich our perimeter catalogue with a highly innovative solution, the result of two years of work carried out by our researchers and specialized technicians. We will continue to follow the path of investments in innovation, the only possible strategy to overcome the challenges and take the opportunities of the global market. The next development steps of the BeeS are focused on releasing of the LAN and Multiplex versions”.

In-depth materials on BeeS are available at the following link:
